Peer Assessment Grader Guidelines

Graders should give 0, 1, or 2 points for each submission based on three criteria: accuracy, justification, and notation (AJN).

Note that submissions with any significant errors should get 0 for that AJN criteria. Only very minor issues should get a 1 score, and please ask your TA/instructor for clarification if needed.

A: Accuracy
    The A category is for *accuracy*. Things to check for:

- is the answer fully correct?

- is the answer fully simplified?

- is the answer boxed (if appropriate)?

J: Justification
    The J category is for *justification*. The answer should follow without any gaps in the argument. If there are any formulas used then the formula should be clearly stated and named/identified. Work should be clearly organized and easy to follow.
    Things to check for:

- are there algebraic errors?

- are there unsupported steps in the solution?

- are the formulas clearly stated (if appropriate)?

N: Notation
    The N category is for *notation*. The work should be properly annotated with notation that is consistent with the lecture/textbook. Things to check for:

- is the equality symbol "=" used correctly throughout?

- are logical steps annotated correctly with the implies symbol "$\Rightarrow$"?

- are the math symbols used appropriately?
