# Sample Midterm 2B, Math 1554, Fall 2019 

## Instructors:

Date: Fall 2019, this is a 50 minute exam
PLEASE DO NOT PHOTOCOPY THIS EXAM
Section Number (e.g. A4, QH3, etc.) $\qquad$ TA Name $\qquad$
Student GT Email Address: $\qquad$

## Circle your instructor:

If you are in a QH section, which High School do you attend? $\qquad$

## Student Instructions

- Show your work and justify your answers for all questions unless stated otherwise.
- Organize your work in a reasonably neat and coherent way.
- Calculators, notes, cell phones, books are not allowed.
- Use dark and clear writing: your exam will be scanned into a digital system.
- Exam pages are double sided. Be sure to complete both sides.
- Leave a 1 inch border around the edges of exams.
- Any work done on scratch paper will not be collected and will not be graded.

Math 1554, Sample Midterm 2B. Your initials: $\qquad$
You do not need to justify your reasoning for questions on this page.

1. (10 points) Indicate true if the statement is true, otherwise, indicate false.
true false
a) If $A \vec{x}=\vec{b}$ has exactly one solution for every $\vec{b}, A$ must be singular.
b) If $\vec{x}, \vec{y} \in \mathbb{R}^{3}$ are linearly independent, then $\{\vec{x}, \vec{y}, \vec{x}+\vec{y}\}$ is a basis for $\mathbb{R}^{3}$.
c) The set of solutions to $A \vec{x}=\vec{b}$, for any $\vec{b} \in \mathbb{R}^{n}$, is a subspace.
d) If $A, B \in \mathbb{R}^{n \times n}$ and $A B=I$, then $B A=I$.
e) Any matrix that is similar to the identity matrix must be equal to the identity matrix.
f) If $A, B \in \mathbb{R}^{m \times n}$ have the same null space, then they have the same RREF.
g) If $A$ is $n \times n$, and there exists a $\vec{b} \in \mathbb{R}^{n}$ such that $A \vec{x}=\vec{b}$ is inconsistent, then $\operatorname{det}(A)=0$.
h) If $A$ has an $L U$ factorization, then $A$ is invertible.
i) If $A \in \mathbb{R}^{n \times n}$ has eigenvector $\vec{x}$ then $2 \vec{x}$ is also an eigenvector of $A$.
j) Swapping the rows of $A$ does not change the value of $\operatorname{det}(A)$.
2. (2 points) A $2 \times 2$ matrix $A$ has eigenvalues $\lambda_{1}=1$ and $\lambda_{2}=2$, with eigenvectors and eigenspaces indicated in the picture. Draw $A \vec{x}$ and $A \vec{y}$.

Math 1554, Sample Midterm 2B. Your initials: $\qquad$
You do not need to justify your reasoning for questions on this page.
3. (2 points) Fill in the missing entries of the $3 \times 3$ matrix $A$ with non-zero numbers so that $A$ has null space spanned by $\vec{v}$.

$$
\vec{v}=\left(\begin{array}{c}
2 \\
-1 \\
-1
\end{array}\right), \quad A=\left(\begin{array}{ccc}
1 & 2 & 0 \\
1 & 0 & 2 \\
0 & - & -
\end{array}\right)
$$

4. (6 points) If possible, write down an example of a matrix with the following properties. If it is not possible to do so, write not possible. You do not need to justify your reasoning.
(a) A $4 \times 3$ matrix $A$ with $\operatorname{rank}(A)=3$ and $\operatorname{rank}\left(A^{T}\right)=4$.

$$
A=(
$$

(b) A $2 \times 3$ matrix in RREF whose null space is spanned by $\left(\begin{array}{c}2 \\ -4 \\ 1\end{array}\right)$.

$$
A=(
$$

(c) A $3 \times 3$ matrix in echelon form, $A$, such that $\operatorname{Col}(A)$ is spanned by the vectors $\left(\begin{array}{l}2 \\ 0 \\ 0\end{array}\right),\left(\begin{array}{l}1 \\ 2 \\ 0\end{array}\right)$.

$$
A=(
$$

(d) A $4 \times 4$ stochastic matrix, $P$, such that the Markov Chain $x_{k+1}=P x_{k}$ for $k=0,1,2, \ldots$, does not have a unique steady-state.

$$
P=(\square)
$$

5. (1 point) Suppose $\vec{v}_{1}, \vec{v}_{2}$ are eigenvectors of an $3 \times 3$ matrix $A$ that correspond to eigenvalues $\lambda_{1}$ and $\lambda_{2}$.

$$
\vec{v}_{1}=\left(\begin{array}{l}
1 \\
8 \\
0
\end{array}\right), \quad \vec{v}_{2}=\left(\begin{array}{l}
5 \\
0 \\
2
\end{array}\right), \quad \lambda_{1}=1, \quad \lambda_{2}=\frac{1}{10}
$$

Vector $\vec{p}$ is such that $\vec{p}=\vec{v}_{1}-13 \vec{v}_{2}$. What does $A^{k} \vec{p}$ tend to as $k \rightarrow \infty$ ? $\square$

Math 1554, Sample Midterm 2B. Your initials:
You do not need to justify your reasoning for questions on this page.
6. (3 points) If the determinant $\left|\left(\begin{array}{cc}a & b \\ 1 & 0\end{array}\right)\right|=3$, compute the value of $\left|\left(\begin{array}{ccc}-1 & 0 & 0 \\ 2 a & 2 b & 0 \\ 0 & 0 & 5\end{array}\right)\right|$.
7. $A$ is the $3 \times 6$ matrix $A=\left[\begin{array}{cccccc}1 & 6 & -4 & 0 & 0 & -1 \\ 0 & 0 & 0 & 1 & 2 & -6 \\ 0 & 0 & 0 & 0 & 1 & 6\end{array}\right]$
(a) (1 point) The rank of $A$ is $\qquad$ .
(b) (1 point) The dimension of $\operatorname{Null}(A)$ is $\qquad$ .
(c) (2 points) Write down a basis for $\operatorname{Col}(A)$.
(d) (3 points) Construct a basis for $\operatorname{Null}(A)$.

Math 1554, Sample Midterm 2B. Your initials:
8. (4 points) $S$ is the parallelogram determined by $\vec{v}_{1}=\binom{4}{-2}$, and $\vec{v}_{2}=\binom{0}{1}$. If $A=$ $\left(\begin{array}{ll}2 & 3 \\ 2 & 2\end{array}\right)$, what is the area of the image of $S$ under the map $\vec{x} \mapsto A \vec{x} ?$
9. (4 points) If possible, compute the $L U$ factorization of $A=\left(\begin{array}{cc}5 & 4 \\ 10 & 6 \\ 0 & 2 \\ -5 & 1\end{array}\right)$

Math 1554, Sample Midterm 2B. Your initials:
10. (4 points) List all possible values of $k$, if any, so that $A$ has a real eigenvalue with geometric multiplicity 2 . Show your work.

$$
A=\left(\begin{array}{ccc}
3 & 2 & 0 \\
2 & 3 & 0 \\
0 & 0 & k
\end{array}\right)
$$

11. (4 points) Construct a basis for the subspace

$$
H=\left\{\vec{x} \in \mathbb{R}^{3}: 5 x_{1}+4 x_{2}-7 x_{3}=0\right\} .
$$

Math 1554, Sample Midterm 2B. Your initials:
12. (5 points) $A$ has only two distinct eigenvalues, 0 and 1. $A=\left(\begin{array}{ccc}0 & 1 & -1 \\ 1 & 0 & 1 \\ 1 & -1 & 2\end{array}\right)$.
(a) Construct the eigenbasis for eigenvalue $\lambda=0$.
(b) Construct the eigenbasis for eigenvalue $\lambda=1$.
