§16.3: FToLI and Potential Functions

Find a potential function for $\mathbf{F} = \langle P, Q, R \rangle$ and use FToLI to evaluate the line integral over the curve C parametrized by $\mathbf{r}(t)$, $t \in [0, 1]$.

$$\int_C \mathbf{F} \cdot T \, ds = \int_C (2x \ln y - yz) \, dx + \left(\frac{x^2}{y} - xz \right) \, dy - xy \, dz,$$

where $\mathbf{r}(0) = (1, 2, 1)$, $\mathbf{r}(1) = (2, 1, 1)$.
